

MMT WHITEPAPER

Introduction

What is Money Machine Token?

Money Machine Token or \$MMT for short is a deflationary token designed to become scarcer over time. It is a token designed to distribute back to the community and holders through BUSD distribution and through BNB buy backs and burn.

\$MMT has also added a mix into the community aspect, by adding a reward pool that trigger based on certain threshold and will distribute to the user wallet. *Think of it as a coin pusher but in crypto.*

Coin pusher in reference, when it hits a certain threshold, the rewards go to the buyer that triggered it.

Tokenomics

Transfer Tax

Each Transaction has a 14% buying and selling tax, which is broken down as follow :-

- 9 % Reward to holders
 - o 8 % in BUSD reflection
 - o 1 % in Rewards Pool
- 1% Buyback and burn
- 2% Liquidity Pool
- 2% goes to marketing

Distribution of tokens

Total Supply : 1,000,000,000,000,000

- 50% of the token supply is sent to burn address
 - 45% of the supply is available for pre-sale and to fund initial liquidity
 - 4% goes to Founders and team
 - 1% will be used to airdrop
- 

Token Features

BUSD Reflections : Earn BUSD rewards by holding your \$MMT, 8% of every transaction will be redistributed to all token holders in the form of BUSD. Rewards are automatically sent every 60 minutes, but holders may claim it directly at our dashboard.

Reward Pools: Every 1% of each transaction will be distributed to the rewards pool. When the pool reaches a certain threshold, it will trigger and distribute to the holder from the rewards pool. (*Min buying amount to trigger : 1,000,000,000 \$MMT*)

Buyback wallet: 1% from every transaction will be converted into BNB and is stored in the buy back wallet. When activated, the wallet will buy back \$MMT from the exchange and send it to the burn address to be burned forever, making each \$MMT scarcer and more valuable.

Liquidity Pool: Our smart contract deposits 2% from every transaction as \$MMT and \$BNB into a liquidity pool. This solves the liquidity issue and also helps to provide stability to \$MMT price.

Token Features (Cont.)

Anti-Whale Mechanism: To make it as community oriented as possible, there is an anti-whale mechanism that ensures that there is no sale amount higher than 0.125% of the total supply that are possible at a single transaction. It was initially set to 0.25% but after burning 50% of the total supply, we have reduce the limit per transaction by 50% as well.

Roadmap

Q4 2021

- Launched Website and community channels
- White paper
- Presale and launch (Liquidity lock for 1 year)
- Audits
- Listing on Coingecko and Coinmarketcap

Q1 2022

- More aggressive marketing
- More partnership
- Create more usage for \$MMT
- Adding more features to \$MMT
- Money Machine NFT launch

Q2 2022

- Launch a game based on Money Machine NFT
- Add more support and use cases for Money Machine NFT
- TBD (will update more as time passes)
